***Claim Rejections - 35 USC § 112***

Claims 17 and 21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Initially, claim 17 states that the auxiliary drive mechanism is alternately "coupled" and "uncoupled" from the main drive mechanism. However, other independent claims, e.g. claim 1, recite that the door panels are "coupled" throughout the operation of the door panels. Consequently, this use of the term "coupled" seemingly depicts two different structures when in fact only one structure is recited.

In claim 21, last line, it appears as if "closing" should be "opening" instead.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 14 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kramer.

Kramer discloses a motor operated closure, with the protrusions 25,26, serving as the auxiliary mechanism that manipulate the panels as recited. While the device is called a window, the difference between a door and a window are largely functional, it would have been obvious to use Kramer as a door. The wall has not been recited and the door/window is capable of being arranged with a wall as functionally recited.

Claims 14 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sexton in view of Kramer.

Sexton provides a door which has multiple panels with the inner first panel alternately pulling and pushing the second panel by way of enterengaging protrusions, i.e. auxiliary drive mechanisms, thereon in a manner as recited. What is not shown is a power operating source. However, Kramer provides a similar closure which uses a motor. It would have been obvious to modify Sexton to have such a power source so as to automate the door operation.

***Allowable Subject Matter***

Claims 15 and 16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 1-13 and 18-20 are allowed.

Claim 21 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

***Response to Arguments***

Applicant's arguments with respect to claim 19 have been considered and overcomes the rejection.

The terminal disclaimer is accepted and overcomes the rejections based thereon.

The new grounds of rejection are not necessitated by Applicant's response and this action is not made final.
